Calgranulin B - mouse

NyAlternate names: calcium-binding protein MRP-14; macrophage migration inhibitory facto
C;Species: Mus musculus (house mouse)
C;Date: 06-Sep-1996 #sequence_revision 23-May-1997 #text_change 22-Jun-1999
C;Accession: S68242; S68272
R;Lagasse, B.; Waissman, I.i.
R;Lagasse, B.; Waissman, I.i.
A;Description: Mouse MRPS and MRP14, two intracellular calcium-binding proteins associat
A;Reference number: S68242
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A,Molecule type: protein

N.Residues: 56-61,'N', 63-79,'V' < CKA>

N.Comment: The S-100 protein is composed of two related polypeptide chains, alpha and be noteins, S-100 proteins are found in a variety of other tissues.

N.Comment: S-100 is an intracellular protein that weakly binds calcium. It binds zinc verein with different affinities exist for both ions on each monomer. Physiological concentry
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Wolecule type: protein

BF-HAND 1 (LOW AFFINITY) (BY SIMILARITY).
BF-HAND 2 (HIGH AFFINITY) (BY
SIMILARITY).
FUNCTION: Calcitermin possesses antifungal activity against C.albicans and is also active against E.coli and P.aeruginosa but not L.monocytogenes and S.aureus.
SUBUNIT: Homodimer.
                                                               MASS SPECTROMETRY: MW=10444; METHOD=Electrospray; RANGE=1-91
MASS SPECTROMETRY: MW=16889; METHOD=MALD1; RANGE=77-91.
SIMILARITY: Belongs to the S-100 family.
SIMILARITY: Contains 2 BF-hand calcium-binding domains.
                                                                                                                                                                                                                                                                                                                                                                                        MIM; 603112; -

--- TISSUE SPECIFICITY: Found essentially in phagocytic cells.
--- PTM: Phosphorylated by protein kinase C.
--- SIMILARITY: Belongs to the S-100 family.
--- SIMILARITY: Contains 2 EF-hand calcium-binding domains.

                       FUNCTION: Expressed by macrophages in acutely inflammated tissues FUNCTION: Expressed by macrophages in acutely inflammated tissues and in chronic inflammations. Seem to be an inhibitor of protein kinases. Also expressed in epithelial cells constitutively or induced during dermatoses. May interact with components of the intermediate filaments in monocytes and epithelial cells. MISCELLANEOUS: Has been shown to bind calcium. SIMILARITY: Belongs to the S-100 family. SIMILARITY: Contains 2 BF-hand calcium-binding domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           EF-HAND 1 (LOW AFFINITY) (POTENTIAL).

"Purification and characterization of a new member of the S-100
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Blochem. Blophys. Res. Comun. 18:1246-1253(1992).
-!- SUBUNIT: Interacts with 81002.
-!- MISCELLANEOUS: This protein binds two calcium ions.
-!- SIMILARITY: Belongs to the S-100 family.
-!- SIMILARITY: Contains 2 EF-hand calcium-binding domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  human and mouse cDNA sequences.";

Brain Res. Mol. Brain Res. 41:81-89(1996).
-!- FUNCTION: Plays an important role in catfish calcium homeostasis.
-!- TISSUE SPECIFICITY: Abundant in epithelial cells of olfactory rosette, barbel, skin and gill but not brain or muscle.
-!- SIMILARITY: Belongs to the S-100 family.
-!- SIMILARITY: Contains 2 EF-hand calcium-binding domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ictalurus punctatus (Channel catfish).

T "Purification and structural analysis of a murine chemotactic
Cytokine (CP-10) with sequence homology to S100 proteins.";
J. Siol. Chem. 267:7499-7504 (1992).
J. Siol. May an important role in cellular immune reactions.
J. Subully Has maximal chemotactic activity for neutrophils. May play an important role in cellular immune reactions.
J. Subully Similar to that of the S-100 proteins (By similarity).
J. Similarity Similar to that of the S-100 family.
J. Similarity: Contains 2 EF-hand calcium-binding domains.
                                                                                                                                                                                                         Lackmann M., Rajasekariah P., Iismaa S.E., Jones G., Cornish C.J., Hu S., Simpson R.J., Moritz R.L., Geczy C.L.; "Identification of a chemotactic domain of the pro-inflammatory S100 protein CP-10.";

-!- FUNCTION: AGGREGATES KERATIN INTERMEDIATE FILAMENTS AND PROMOTES
DISGLEID-BOND FORMATION AMONGST THE INTERMEDIATE FILAMENTS DURING
TERMINAL DIFFERENTIATION OF MAMMALIAN EPIDERMIS.
-!- FIM: FILAGGRIN IS INITIALLY SYNTHESIZED AS A LARGE, INSOLUBLE,
HIGHLY PHOSPHORYLATED PRECURSOR CONTAINING MANY TANDEM COPIES OF
324 AA. THE PRECURSOR IS DEPOSITED AS KERATOHYALIN GRANULES.
DURING TERMINAL DIFFERENTIATION IT IS DEPHOSPHORYLATED &

"Profilaggrin is a major epidermal calcium-binding protein.";

"Profilaggrin is alocal 13:613-625(1993).

I. Profilaggrin is alocal 13:613-625(1993).

I. FUNCTION: AGGREGATES KERATIN INTERMEDIATE FILAMENTS AND PROMOTES DISULFID-BOND FORMATION ANDWORST THE INTERMEDIATE FILAMENTS DURING TERMINAL DIFFERENTIATION OF MAMMALIAN BPIDERMIS.

I. FUNCTION: AGGREGATES KERATIN INTERMEDIATE FILAMENTS DURING TERMINAL DIFFERENTIATION OF MAMMALIAN BPIDERMIS.

HIGHLY PHOSPHORYLATED PRECURSOR CONTAINING MANY TANDEM COPIES OF 324 AA. THE PRECURSOR IS DEPOSITED AS KERATOHYALIN GRANULES.

CONTRIBUTED DIRECTORISOR IS DEPOSITED AS KERATOHYALIN GRANULES.

DURING TERMINAL DIFFERENTIATION IT IS DEPHOSPHORYLATED & PROTEOLYTICALLY CLEAVED.

PROTEOLYTICALLY CLEAVED.

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

This clone was sequenced as part of a high-throughput process to sequence clones from Drosophila Gene Collection 1 (Rubin et al., Science 2000). The sequence has been subjected to integrity checks for sequence accuracy, presence of a polya tail and contiguity within 100 kb in the genome. Thus we believe the sequence to reflect accuracity this particular cDNA clone. However, there are artifacts associated with the generation of cDNA clones that may have not been detected in our initial analyses such as internal priming, priming from contaminating genomic DNA, retained introns due to reverse transcription of unspliced precursor RNAs, and reverse transcriptase errors that result in single base changes. For further information about this sequence, including its location and relationship to other sequences, please visit our Web site changefultily, berkeley, edu) or send email to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GSRSSPERDSLVRLSQRRPDLVDAQYTILATDADPVEKMPLVEHCQFKYLFNFRGVAA

CLONE LENGTH: This sequence does not necessarily represent the entire insert of this clone. Overlapping regions of clones are only sequenced and submitted once, so the sequence for the remainder of the insert may be found in the record for the adjacent clones. Overlapping clones are noted at the beginning and end of the Peatures listing.

STSs are identified using ePCR (Genome Res. 7:541-550) searches of a local database that includes entries from dbSTS, GDB, and local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green, unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST (Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the BST and cDNA sequences. Genes demonstrate at least two exons ANNOTATION OF FEATURES:

flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE:Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

http://www.hgsc.bcm.tmc.edu:8088/quality.info/genbank.annotation.ht QUALITY OF INDIVIDUAL BASES:This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found

Submitted (05-APR-2001) Sanger Centre, Hinxton, Cambridgeshire, CB10 1SA, UK. B-mail enquiries: humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk clone requests: clonerequest@sanger.ac.uk clone requests: clonerequest@sanger.ac.uk clone Apr 6, 2001 this sequence exersion replaced gi:13273767.

During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations. Where differences are found these are annotated as variations, together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality of discenting problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest. The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Bm; EMBL; Sw; SMISSPROT; Tr; TREMBL; WO. WORMPEP; Information on the WORMPEP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             http://www.sanger.ac.uk/HGP/Chri3

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  IMPORTANT: This sequence is not the entire insert of clone RP11-431P10 It may be shorter because we sequence overlapping sections only once, except for a 100 base overlap. The true right end of clone RP11-431P10 is at 86050 in this sequence. The true left end of clone RP11-569012 is at 48980 in this sequence. The true right end of clone RP11-560012 is at 1000 this sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     4530. .6107
